Forward-looking engineering firms choose Additive Industries' MetalFABG2 AM printer because there's nothing else like it. That's why the Alfa Romeo F1 team is utilizing it to manufacture precision-engineered components on this season's car.

The MetalFABG2 AM printer's unique configurations enable you to upgrade its functionality at any time, scaling up as your production needs grow and protecting your investment. It allows you to automate any workflow: from remote job starts to de-powdering and sieving, to production runs with multiple back-to-back builds.
